

THE “STAR POWER” INDEX

QUANTIFYING THE IMPACT OF SOCIAL INFLUENCE
ON GLOBAL BOX OFFICE REVENUE

PRESENTED BY:

TEAM GHANTI TINININI

GROUP MEMBERS

<u>MEMBER NAME</u>	<u>ROLE</u>	<u>ROLE DESCRIPTION</u>
ANUPRASH POKHAREL	PROJECT LEAD	RESPONSIBLE FOR PROJECT TIMELINE AND FINAL REPORT INTEGRATION.
KABIT KHADKA	STATISTICAL ANALYST	RESPONSIBLE FOR HYPOTHESIS TESTING (ANOVA) AND MODEL VALIDATION (REGRESSION).
PRASHANNA DHAMI	APP DEVELOPER	RESPONSIBLE FOR THE PYTHON- BASED "GREENLIGHT TOOL" DEMONSTRATION.
SARJYANT MAHARJAN	DATA ENGINEER	RESPONSIBLE FOR CLEANING THE TMDB DATASET AND MERGING SOCIAL MEDIA METRICS

THE PROBLEM

WHY DO "BLOCKBUSTERS" STILL FAIL?

- Traditional models rely on Production Budget and Genre.
- The Gap: They ignore the modern "Digital Footprint" of the cast.
- The Goal: Moving from Budget-driven predictions to Influence-driven insights.

RESEARCH OBJECTIVE

- Identify the correlation between a lead actor's social media "Popularity Score" and total revenue.
- Analyze if certain genres (e.g., Horror vs. Drama) are more sensitive to social media sentiment.
- Develop a predictive model to assist studios in "Greenlighting" projects.

STATISTICAL METHODOLOGY

THE TECHNICAL APPROACH

- ANOVA: To compare ROI across different genres (Testing: "Do Sci-Fi fans care more about stars than Comedy fans?")
- Multiple Linear Regression: To predict Revenue based on a combination of Budget + Popularity + Vote Average.
- Hypothesis: "A 10% increase in Cast Popularity Score correlates to a higher ROI than a 10% increase in Production Budget."

DATA STRATEGY & SOURCES

THE VISION: "THE GREENLIGHT TOOL"

END-TO-END APPLICATION

- Concept: A Python-based dashboard for Studio Executives
- User Inputs: Genre, Estimated Budget, Lead Actor Popularity
- Output: * Predicted Revenue Range.
 - "Risk Level" assessment.
 - Visual "Success Probability" gauge.

TIMELINE & NEXT STEPS
